BIODIVERSITY

Mahanadi Coalfields Limited

World Environment Day-2020

Department of Environment and Forest

BIODIVERSITY- TIME FOR NATURE.

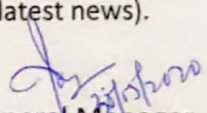

Biodiversity is an essential element of life, the very fabric of "natural capital". Nature provides nutritious food, supplies clean air and water, sustains livelihoods, acts as a buffer against extreme weather events and regulates the climate.

As we encroach on nature and deplete vital habitats, increasing numbers of species are at risk. The COVID-19 pandemic is a reminder of the close relationship between human and planetary health.

As a part of awareness program on the occasion of WED-2020, this time we are conducting competitions through online mode to avoid the social gatherings, the following completions/events will be held as per schedule given below.

Events for World Environment Day 2020			
Groups	Painting/ Drawing	Short term informative videos/audio (Time limit:2 min)	Slogans
